## **CONTROLLER EXTENSION TIMER**

*(Specification)*

The Controller Extension Timer shall be designed for electrical connection to one station of a 24VAC controller. It shall be started by the on/off cycle of that station but shall not interfere with the normal use of the station. Once activated the Controller Extension Timer shall proceed automatically through its four stations independent of the controller. The Controller Extension Timer shall be programmable from one minute to 4 hours per station and the output shall be 24 VAC, 2.0 Amp (including master valve). The effect shall be four stations added to the controller.

The Controller Extension Timer shall have overload protection and manual means of operation so it may be used as a simple controller when powered by any 24VAC supply.

The Controller Extension Timer shall be as manufactured by Transitional Systems Mfg. Inc., Yuba City, California, USA.
